Response to Amendment

1. Applicant's amendments and arguments of November 12, 2008 have been entered.
2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 103

3. Claims 1-3, 8, 11-13, 15, and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Montaner et al.

Montaner et al. discloses a fluid dispenser head associating with a fluid dispenser member, the head comprising a body 8 defining a fluid outlet channel, a nozzle defining a dispenser orifice, a cover 4 assembled on the body to mask the body at least in part, and a skirt as recited in claim 8 (see Fig. 1 enclosed herein). Regarding the cover being overmolded on the body, whether a product is patentable depends on whether it is known in the art or it is obvious, and is not governed by whether the process by which it is made is patentable. Regarding claim 3, overmolding the cover onto the nozzle would have been a matter of design choice since the device would still function properly with such an arrangement. Regarding claims 12 and 13, Montaner et al. disclose the structural limitations of the instant invention and the method of overmolding has already been discussed above.

4. Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Montaner et al. in view of Andris.

Andris teaches a fluid dispenser head comprising a nozzle 4 that projects outwards from the head. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the device of Montaner et al. by having the nozzle to project outwards from the peripheral surface as has been taught by Andris.

Response to Arguments

5. Applicant's arguments filed November 12, 2008 have been fully considered but they are not persuasive. The cover being overmolded on the body is a product-by-process statement and although Montaner et al. do not disclose the cover being overmolded on the body, it does not render the device patentable because the prior art discloses the claimed structural limitations. Also, since the cover 4 of Montaner et al. is permanently attached to body 8, it would also have been obvious to one having ordinary skill in the art at the time the invention was made that the cover would be overmolded onto the body since this is the quickest, most cost effective, and most efficient way of forming the parts for mass production of the device.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
